

Consumer Safety Notice

Aqua Lung is conducting a voluntary product check of select regulators with the Automatic Closer Device (ACD) yoke systems. The concerned regulator models are:

- **The Titan LX ACD Yoke Regulators** (all yoke models with serials number starting with the letter E or F) and which have never been serviced by an authorized Aqua Lung retailer or technician)

- **The Core ACD Yoke Regulators** (all yoke models with serial numbers starting with the letter E, F, G or H (and prior to H043301) and which have never been serviced by an authorized Aqua Lung retailer or technician)

- **The Legend ACD or the Legend LX ACD Yoke Regulators** (all yoke models with serial numbers starting with the letter E, F, G or H (prior to H043301) and which have never been serviced by an authorized Aqua Lung retailer or technician)

For these regulators, a component of the ACD yoke system may not have been properly tightened to the recommended torque specification during manufacture. Aqua Lung is concerned of a possible gas flow failure during a dive when the regulator has been fitted on certain valves.
