AQUA LUNG®

FIRMWARE UPDATE RELEASE DETAILS

i300

DIVE COMPUTER

to version 1D

(from any previous version)

EXPLANATION

In response to input received from staff and users of the i300, Aqua Lung has corrected or modified the following items to improve the i300's operation:

- We have received reports of units not registering a change to sea level when the previous activation period was at high altitude. This has only been shown to occur when relying on the H2O (wet) activation feature (i.e., directly diving the unit without activating it first on the surface). This firmware release corrects the bug.

UPDATE PROCESS

You can update your i300 firmware (operating software) to newly released revision 1D by following the "How to Update Firmware to a Dive Computer" instructions in the DiverLog software. There is no need to return the unit to Aqua Lung.

DiverLog is available on the http://www.ediverlog.com web site.

Should you have any questions, please contact your Authorized Aqua Lung Dealer.
